A History

John Brooks is a privately owned company, started in 1964 in Christchurch as a general engineering manufacturing operation by John and June Brooks.

Major customers were the Meat processing industries of the South and Lower North Island to whom they designed and built slaughter floor and packaging conveyor Systems. In 1970 they shifted to a larger premises and began to sell bearings, chain, sprockets and other Power transmission product lines.

Today this product line has increased substantially to include major agencies for Electric motors, motor speed control and servo systems for robotics. Industrial transmission products are still a main stay of sales, along with design and supply of conveyors and their components.

Pumps and controls for milking machine systems and the Wine industry is now a growing division, with exports to Europe, China and Australia, along with Motion Control products supply and commissioning - ensures John Brooks are prepared for the future.

The company is owned and operated by John's sons Murray and Chris Brooks. The third generation, Karl Brooks, provides Business Development with a strong focus in bringing new practice and processes to the company.

AUTOMATION

We offer the whole Automation solution, from linear motion to rotary position. Our skilled team can assess, design and commission your existing machine upgrade or new build application. We offer trusted brand products from ABB, Trio motion, Beijer, Linmot and Oriental Motor Japan.

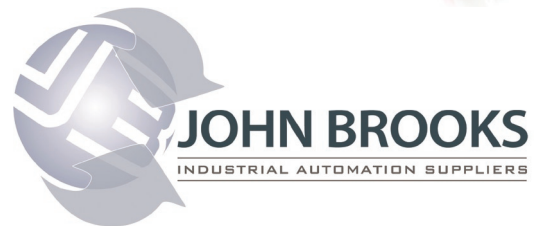

ROBOTIC AUTOMATION - MOTION CONTROL POWER TRANSMISSION

Teco VSD controls and AC & DC motors that can be fitted with fail safe brakes using our specialised mounting kits off the shelf. Tension control to unwind applications, we represent RE from Italy and Magpowr USA.

VARIABLE SPEED DRIVES

ELECTRICAL

INDUSTRIAL

John Brooks Ltd are built on Industrial product supply with over 100 years accumulated experience - we offer trusted gearboxes, couplings, Vee and Timing belt plus many more to suit your application. Dodge Grip tight and ISN transmission bearings and housings are becoming a preferred timber industry standard.

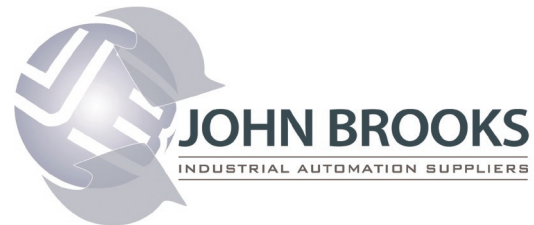

ROBOTIC AUTOMATION - MOTION CONTROL POWER TRANSMISSION

Powered roller transfer or slat band bottle conveyors - we can convey your products needs around the factory. We offer a complete design to run options to component supply only.

VARIABLE SPEED DRIVES

CONVEYORS

DAIRY SYSTEMS

Dairy Vac and Dairy Flo controls increase the quality output from the dairy shed while delivering savings to the farmer with lower refrigeration running cost.

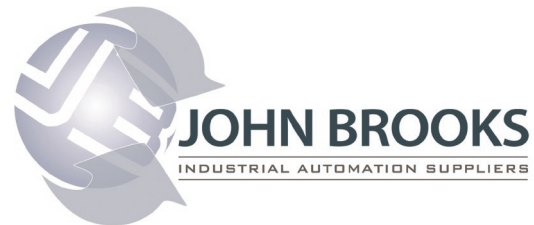

ROBOTIC AUTOMATION - MOTION CONTROL POWER TRANSMISSION

We can handle that wine gently with the portable variable pump, this utilises the Boden Stainless steel impeller pump with an AC motor and built in variable speed control that has a remote control.
